

Stove Top Toaster

There is nothing like eating hot and crunchy toast while out in the bush, and now you can have a simple, versatile, energy saving and hygienic StoveTop Toaster wherever you are.

The StoveTop Toaster is an invention from Argentina designed to toast, roast, melt and heat on any heat source. It's compact 20x20x1cm design and 300g weight means it is an accessory to be included in any hunter's pack.

It is simple to use on all stovetops, whether you use gas, electricity, charcoal or even wood fire or methylated spirit burner. The tray is covered with baked enamel and the grid and handle are made from stainless steel.

The toaster has been used for decades in South America and is now available in Australia through ARGAU Import Australia.

The toaster is simple to clean and store. Simply lift the top grid and wipe it clean. It folds to a thin square placing the handle under the grid for easy storage.

The StoveTop Toaster and Bruschetta Maker can cook more than just toast; you can cook meat or vegetables or use it as diffuser to prevent setting or burning your stew, casserole, porridge or custard. To cook vegies or other softer substances such as fish, simply place aluminium foil over the grid so they don't touch the hot base.

This toaster also comes in handy at dessert time. To melt chocolate or butter simply place the chocolate or butter into a bowl on the grid of the toaster on low heat to simmer.

The StoveTop Toaster costs \$18, plus \$7.50 for postage and handling. For inquiries or orders, please contact ARGAU Import Australia on 02 4257 3182 or visit them online at www.arga.com.au A secure order site allows for fast processing of your order.
